Task 1: Setting a Goal

Observations & Feedback

After typing in her goal description Willa clicked the Next button at the top of the screen, while the keyboard was still on screen expecting the screen to go to the next page.

Willa didn't seem to have a desire to name her goal.

Task 2: Setting a Timeline

Willa noted confusion when she clicked the date icon, and there was no designed module, we used the keyboard. She hesitated on the screen, she have a lull.

Task 3: Shared Accountability

Willa, selected No one to share accountability with. She then was prompted to do the self reflection portion for accountability. She noted confusion on the meanings of this screen, meaning there may need to be a visual distinction / screen prompting the "self reflection" as it's own task flow.

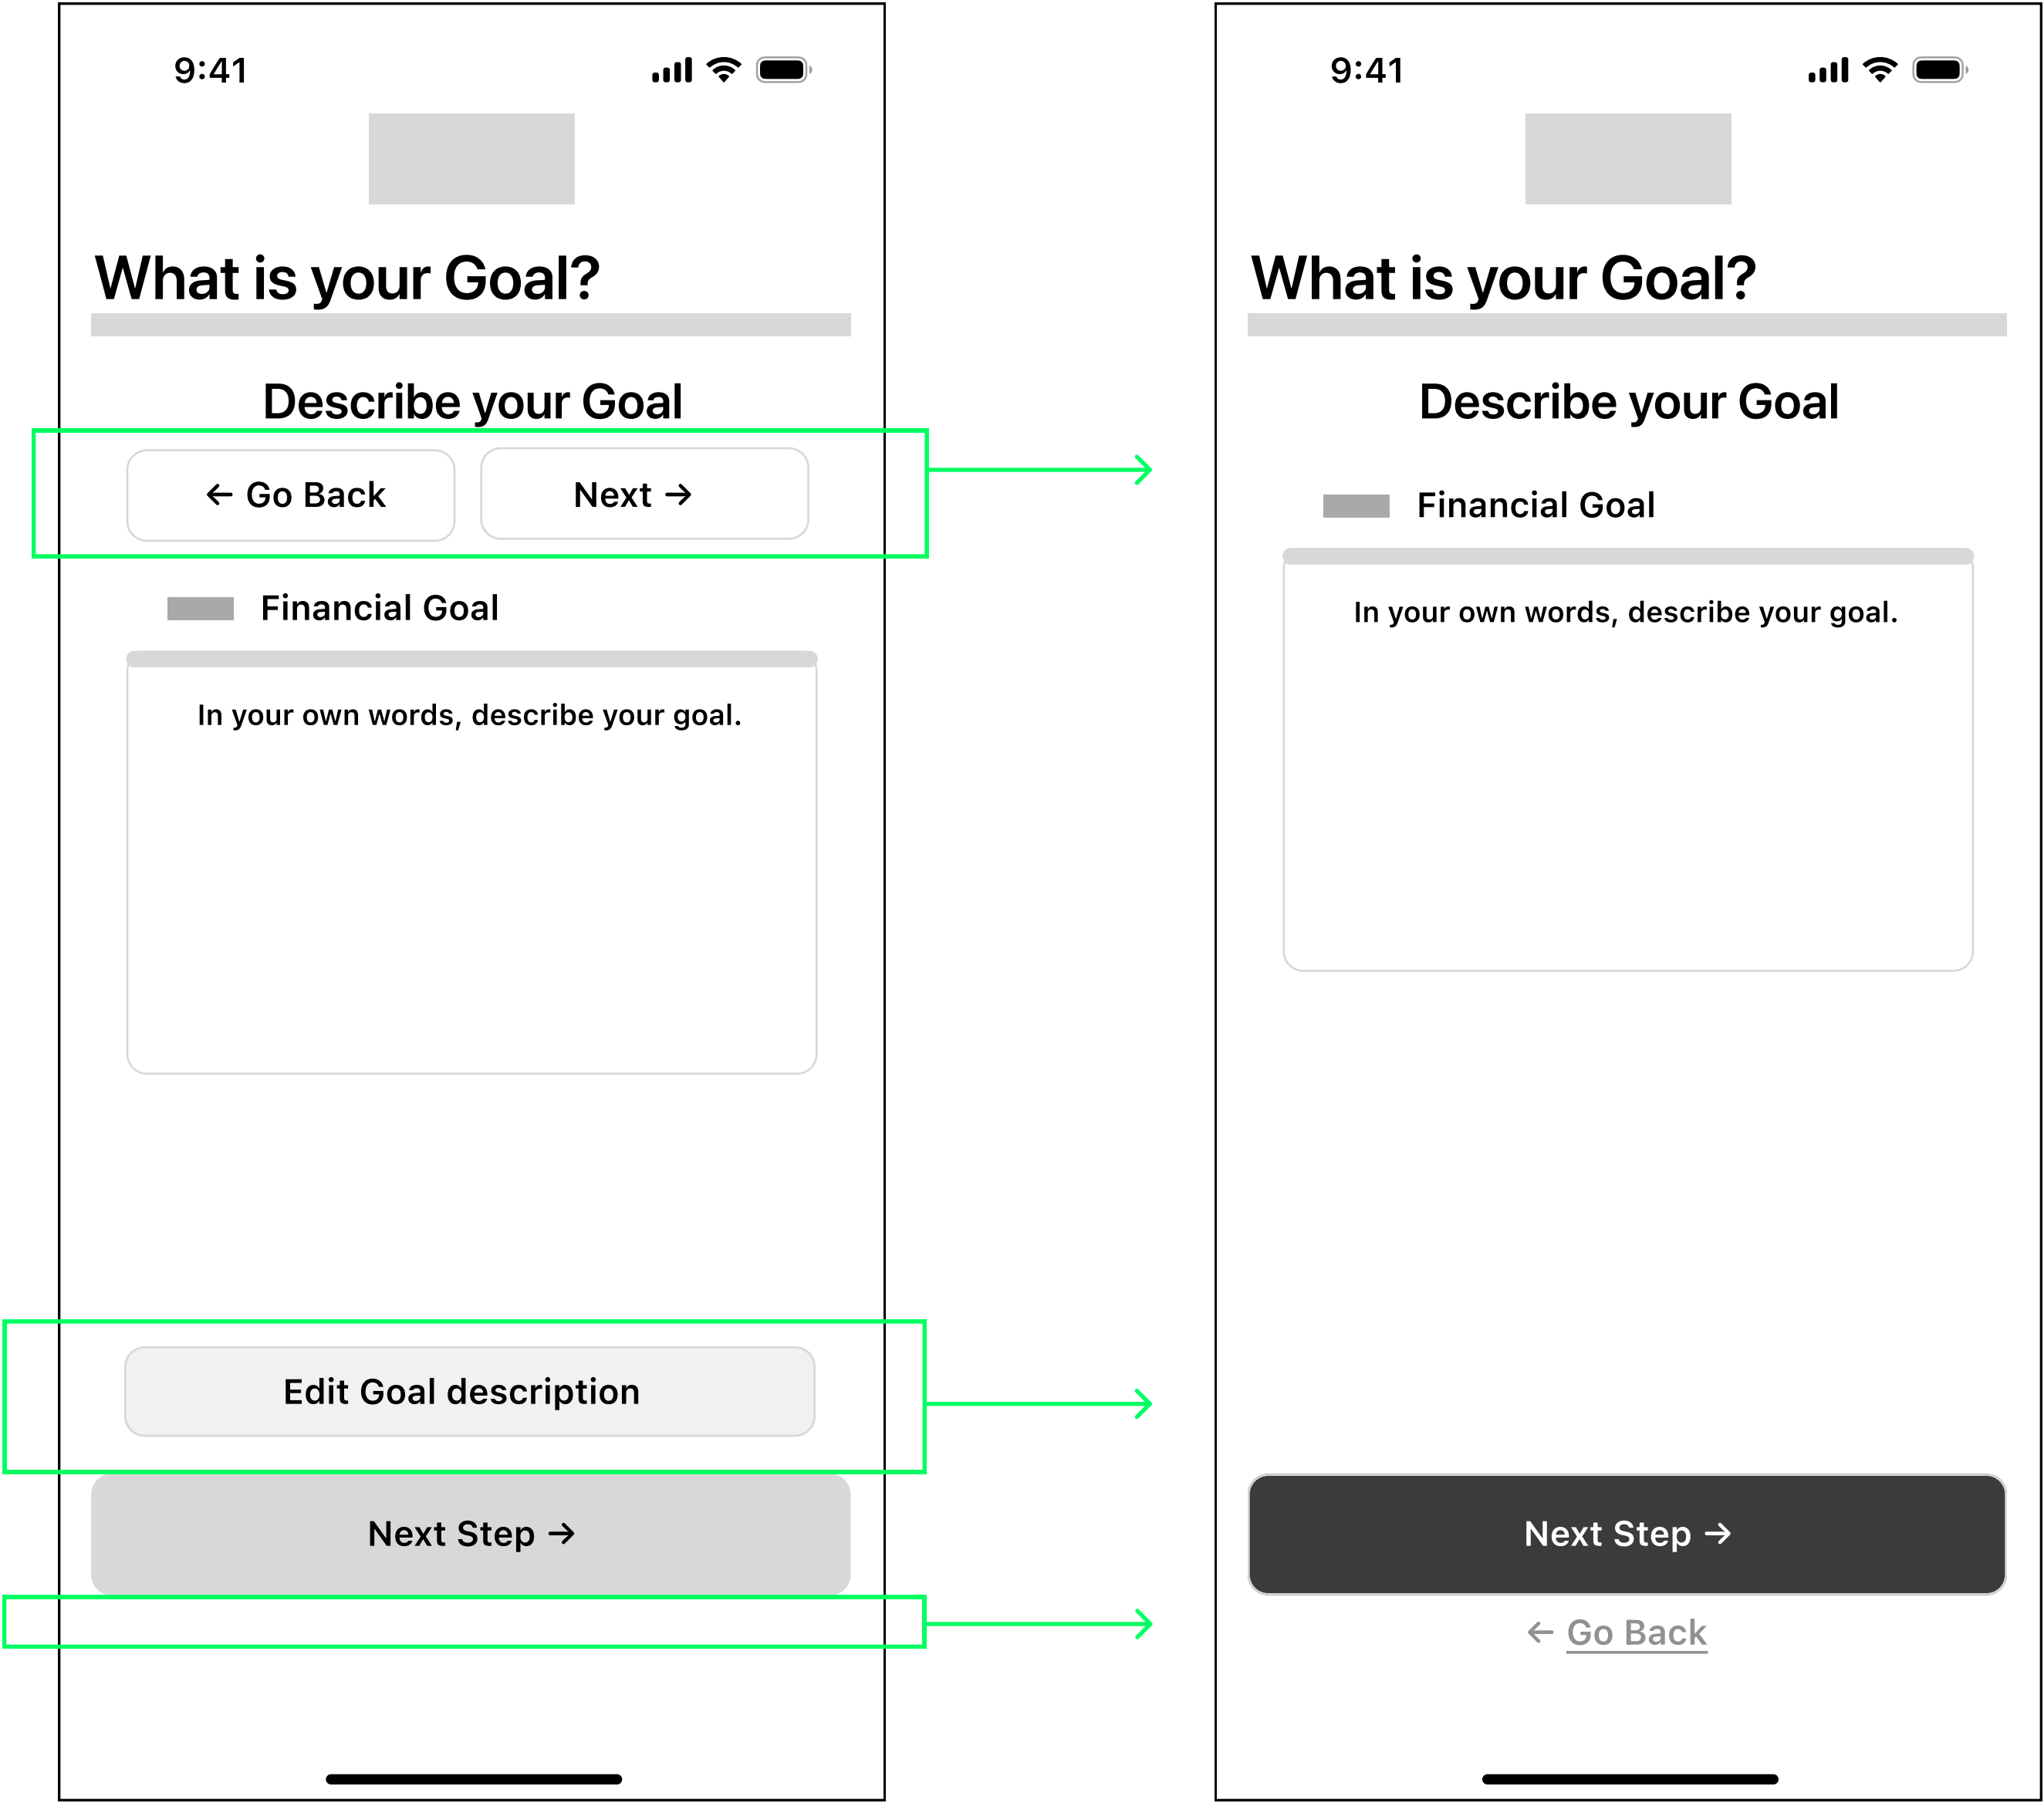

Conclusions

It was clear during Willa's session there were few points of content friction, in terms of the logic behind the design, she didn't ask many questions on these prompts as they were simple by design.

There are however some important features to be considered for the next rounds design, as surfaced by Test 1 with Willa.

- The next button at the top of the screen **likely needs to be redesigned**, or simply **advance after click**.
- A **date picker module needs to be included**.
- The **amount of CTA's per page can be reduced**. (i.e. remove edit options in beginning steps)

Before & After

You will not be asked to edit goal, Keyboard will be responsive. Prompting Editing of goal.

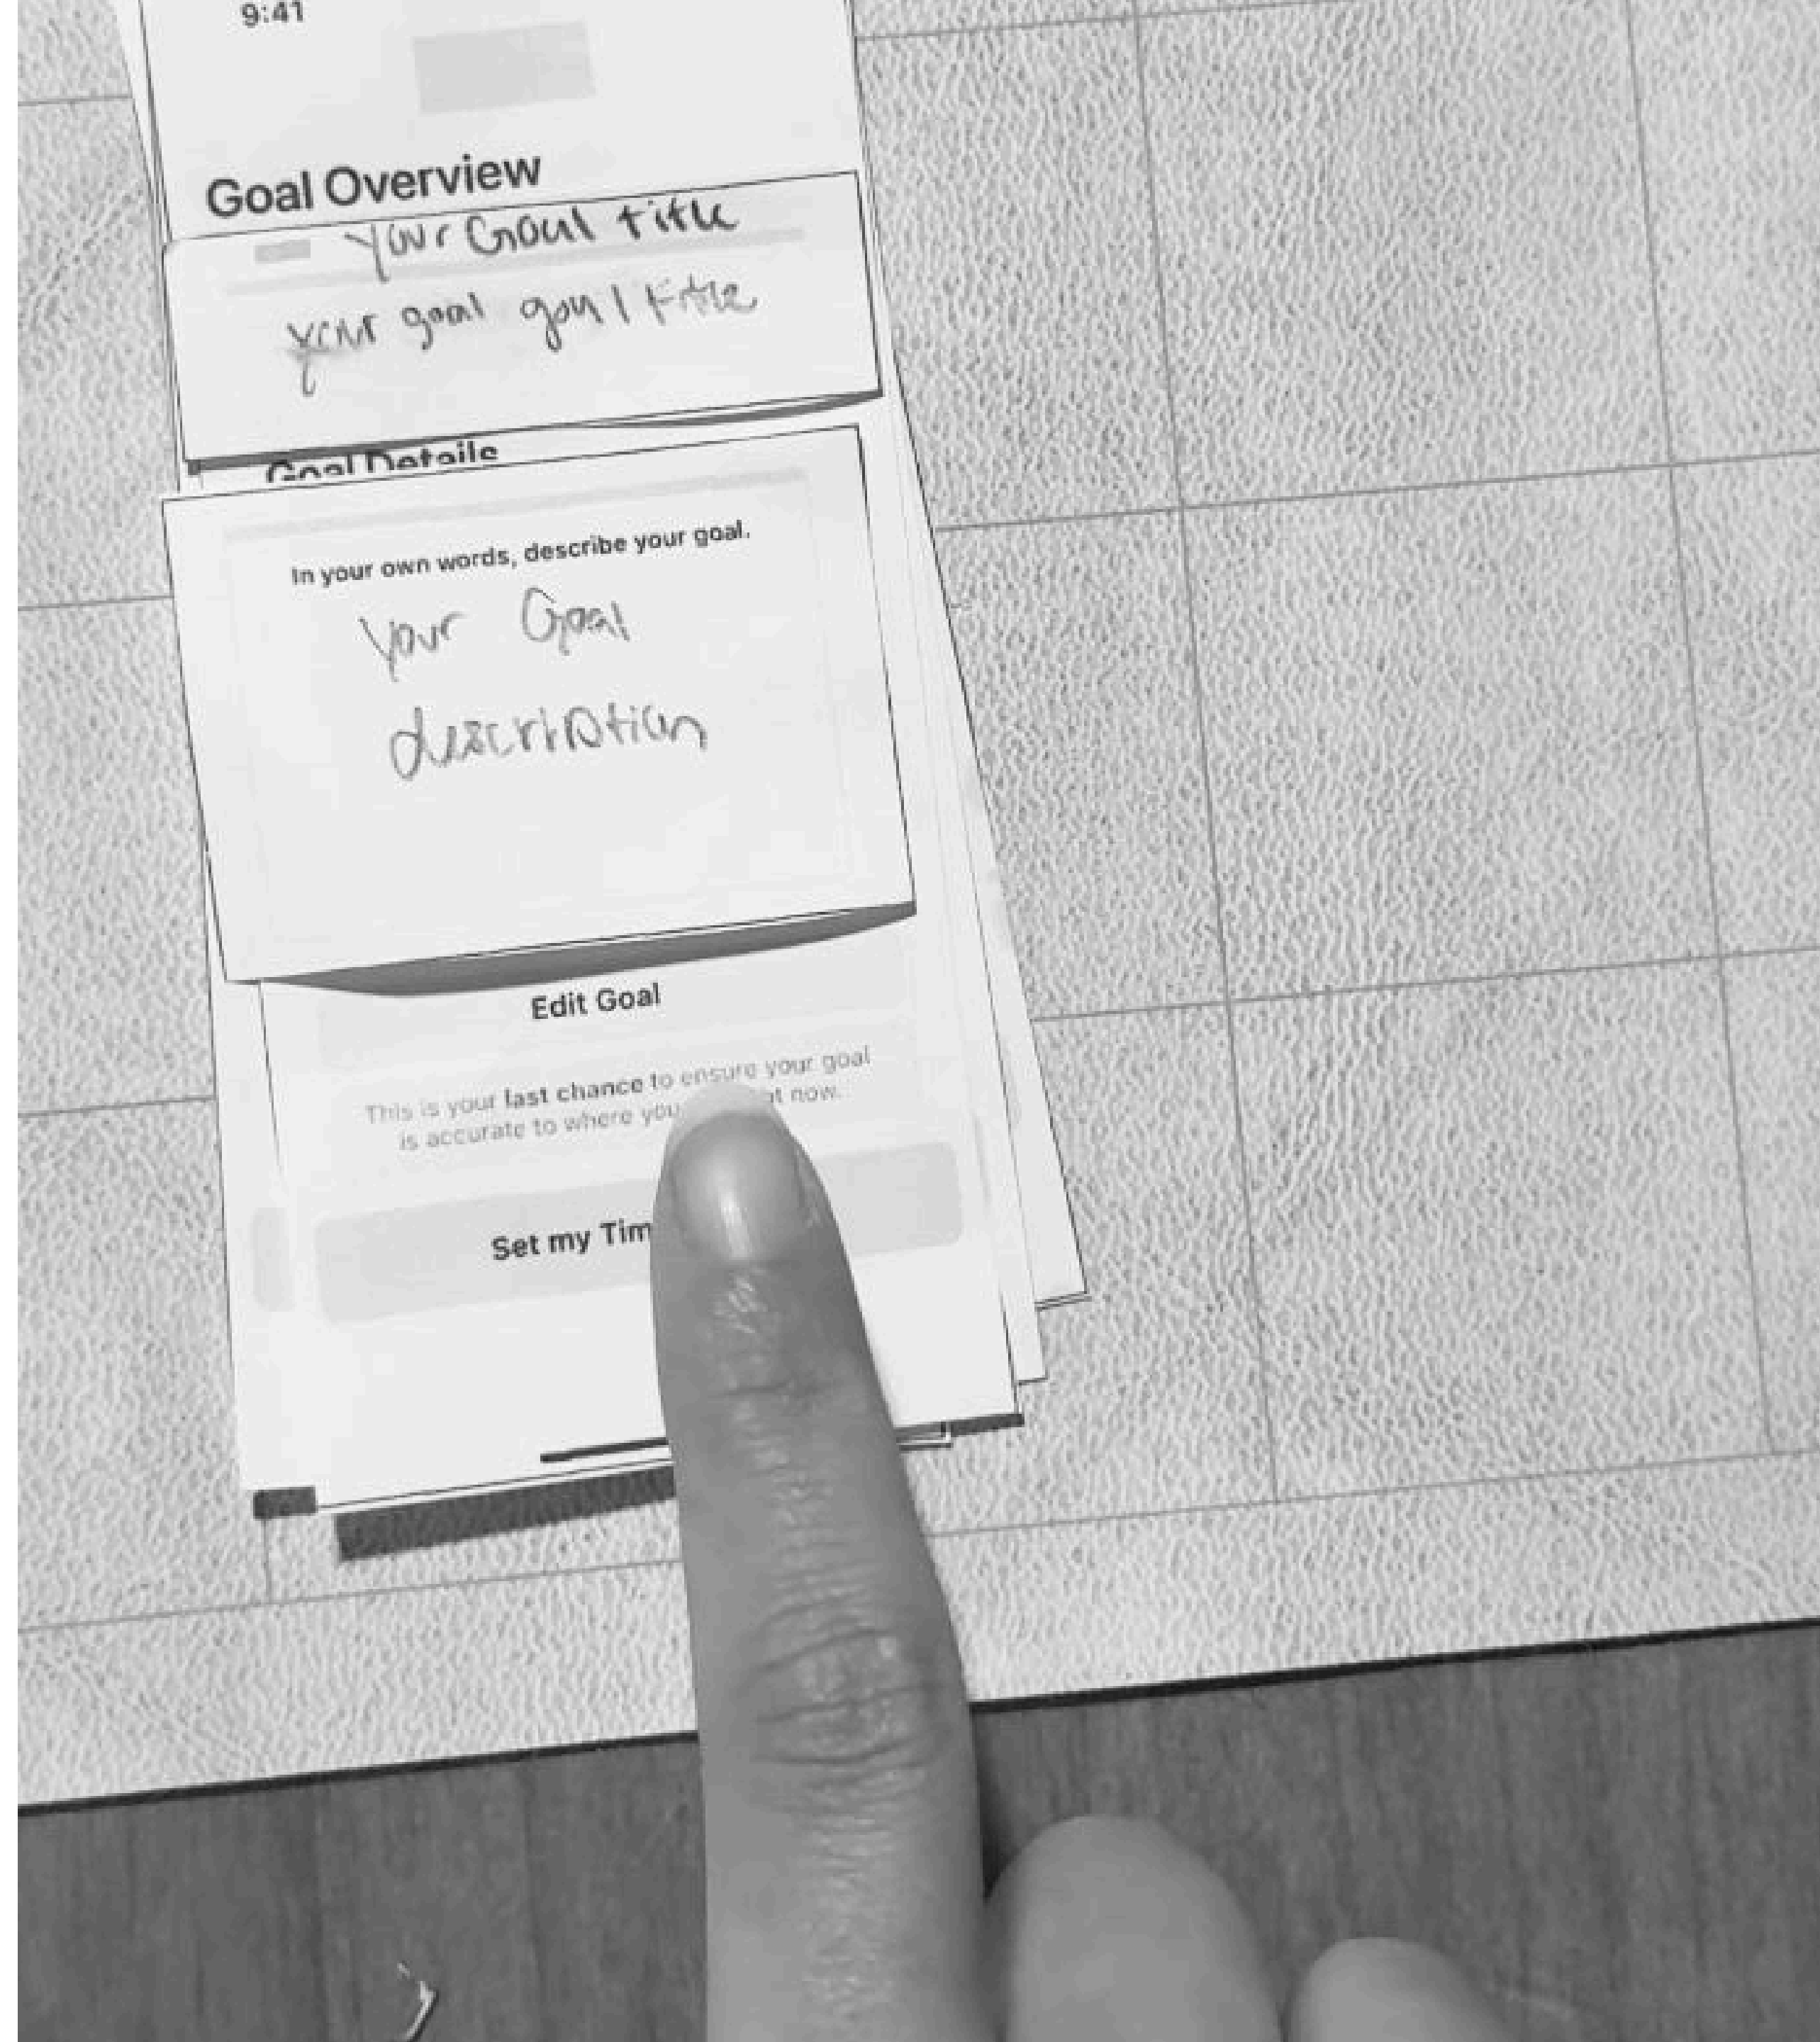

Simplified CTA formatting, Improved Contrast.

Go back options are still present however smaller as used much less frequently.

Task 1: Setting a Goal

Observations & Feedback

On setting a Goal, Maggie didn't initially select to prompt to next, she did not say anything about this on playback it is quite apparent, that this step could go to the next screen automatically.

Maggie Used the enter / send button on the keyboard to indicate description & title completion.

"and then you just confirm that?" - on the Goal Overview.

Task 2: Setting a Timeline

Maggie did not spent much time on the Timeline step, quickly setting the date and moving to the next task flow. This might be a good place for the idea of things out of your control, or a secondary confirmation on non-progress periods.

Task 3: Shared Accountability

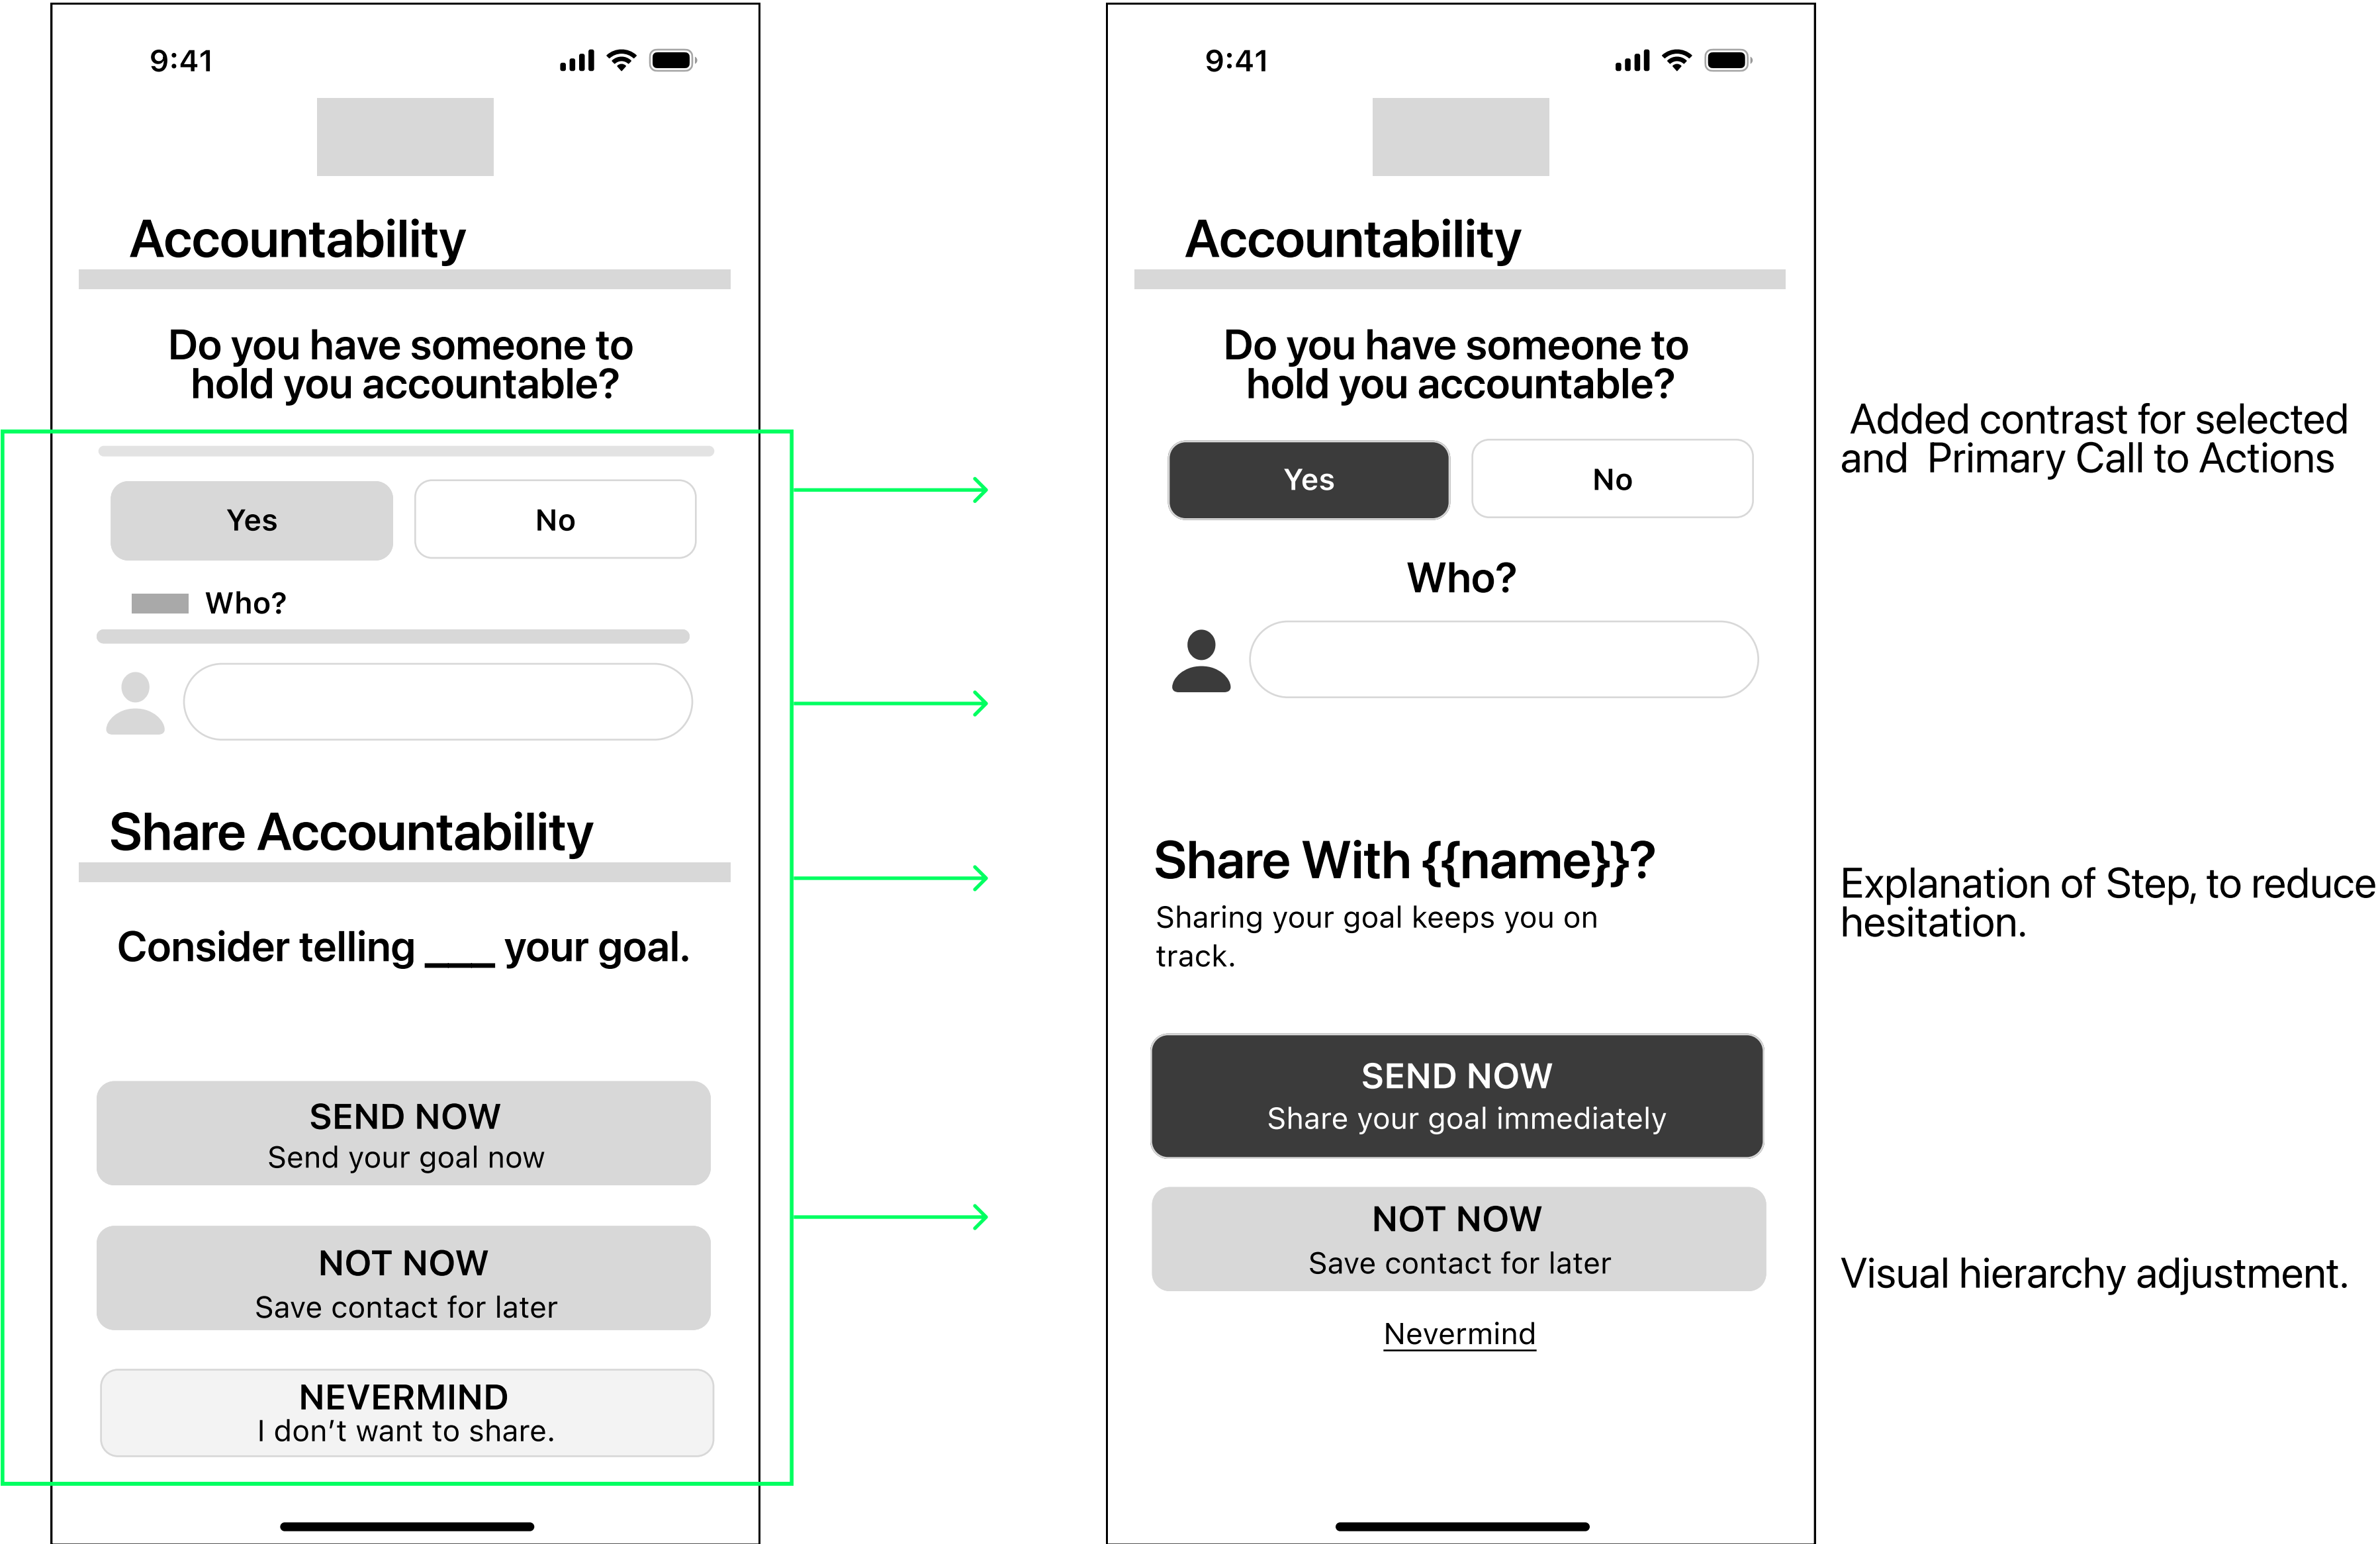

Maggie did select yes to someone to hold her accountable, however she was overwhelmed with the amount of options, opting for NOT NOW. this was supposed to go to the self reflection flow, but she was accidentally prompted to SMS notifications which added accountability pressure and she opted-in with "eeh I guess" displaying the unsure nature of this action taken.

Conclusions

During our session Maggie completed both the goal and the timeline with little hesitation and no pressing questions. The session reiterates the last 2 conclusions from Willa's session along with new conclusions.

- Reiterated: Add date picker & Reduce # of CTAs per page.
- **CTA's especially need to be addressed in Accountability**, the user is currently presented with 3 ~equally sized options, the text inside may be too much. This needs to be addressed for clarity.
- **Opportunity to introduce a secondary non- progress period** or elements out of my control into the timeline, allowing users to spend more time with their goal and its timeline.
- **"Not Now" should also have confirmation of the 'Shared contact'** as noted on the button. The disclaimer text is currently easy to miss. **Never mind and Not Now need differentiation in the following Task Flows.**

Before & After

Tester: Thomas, 21

4.13.2026

Task 1: Setting a Goal

Observations & Feedback

Thomas also didn't select next step on the initial goal category selection. On describing the goal he was unsure of what to do initially. He actually did type out "**I want**" onto the keyboard.

He did not utilize the editing feature on the Goal Overview.

Task 2: Setting a Timeline

Thomas Did select a Lull, meaning he was taken through this specific part of the flow. he chose "I have to" there was little hesitation on the Lull reasoning prefix selectors.

Task 3: Shared Accountability

Thomas did have someone to hold him accountable, and eagerly decided to "Send Now. " In this moment I hand drew a page, as this was not accounted for thus far.

Conclusions

In Thomas' session he went through the Lulls in the timeline of the 3 participants only 1 completed this step. His session however did help inform the use of a prefilled prefix in descriptions.

In this session Thomas physically typed "I want " into the paper model, unaware that his following choices would have built in sentence starters later on, informing this can be added to previous steps.

- **Use of Prefix options** before goal description **reduce the time** users take starting to write about their goal.
- Use of Descriptions should follow the same rules.
- When "**Send Now**" is selected a corresponding **Task flow** or confirmation page still **needs to be designed**.
